PROFESSIONAL SUMMARY

Execution-driven Software Developer delivering reliable, maintainable production software in industrial and regulated environments. Core contributor at **Honeywell**, building **safety-critical applications** across backend logic, desktop systems, and performance-sensitive codebases. Proven record of **shipping production releases**, resolving **high-severity defects**, and contributing to **NPI**. Certified **Cyber Security Advocate** with a security-first development mindset.

IMPACT SNAPSHOT

- **8 production releases shipped**, including one full release built from the ground up
- **Resolved 100+ high-impact production issues**, including performance and safety/security defects.
- **Trusted to interview and evaluate 2–3 YOE engineers** for production teams

WORK EXPERIENCE

- Honeywell**, *Software Developer*

04/2024 – Present | Bengaluru
- Core contributor to a **production-grade, safety-critical industrial application**, owning features end-to-end from design to release.
 - Delivered **8+ production releases**, including one built from scratch, maintaining stability and backward compatibility.
 - Actively **influenced release scope** by driving inclusion of **security fixes**, clearly articulating impact, risk exposure, and long-term value to stakeholders.
 - Owned **security responsibilities** as a **Security Advocate** for the product, applying secure coding practices and aligning development with internal **security** and **EUCRA** policies.
 - Resolved **100+** high-impact production issues, spanning performance bottlenecks and safety/security defects.
 - Worked across multiple codebases and technology stacks, switching contexts and debugging efficiently across technologies.
 - Contributed to New Product Introduction (**NPI**), supporting early-stage design decisions and system hardening in regulated (**SIL-aligned**) environments.
- Velocity Pvt. Ltd.**, *Software Developer – SD*

06/2022 – 06/2023 | Bengaluru, India
- Developed and stabilized **backend application logic** for customer-facing production systems.
 - **Closed ~600 production issues**, significantly improving system stability and reducing recurring defects.
 - Implemented **multi-currency support**, handling internationalization and edge cases.
 - Collaborated directly with clients to clarify requirements and accelerate delivery.

SELECTED PROJECT

- Stock Analysis & Trading Signal Platform**, *Python · Flask · React · PostgreSQL*
- Built a **full-stack stock analysis platform** with React frontend and Flask backend, supporting asynchronous analysis jobs and technical-indicator-driven signal generation.
 - Designed a **modular backend architecture** (Blueprints, background workers, PostgreSQL) to handle long-running analysis and result persistence.
 - Implemented an **end-to-end data lifecycle** (frontend → backend → database → frontend) with job tracking, polling, and result visualization.

TECHNICAL SKILLS

- Languages & Platforms**
- Delphi (Object Pascal), C#/.NET, Backend Application Development, Windows-based Systems
- Engineering Strengths**
- Production-grade Software Development, Performance Optimization, Debugging & Root Cause Analysis, Secure Coding, Release Engineering & Regression Stability
- Core Concepts**
- Object-Oriented Design (OOP), Composition over Inheritance, Memory Management (Manual vs Managed), Deterministic Execution, Reliability-Focused Development

CERTIFICATIONS

- Cyber Security Advocate – Honeywell
- SIL Level 1 Certified
